

# Orruk Megaboss Skin

## Step-by-Step Guide

### Used Color

 	 Deathworld Forest (Base)	 Khorne Red (Base)
	 Loren Forest (Layer)	 Incubi Darkness (Base)
	 Kabalite Green (Layer)	 Mephistone Red (Base)
	 Rakarath Flesh (Base)	 Evil Sun's Scalet (Layer)
	 Pallid Wych Flesh (Layer)	
	 Ivory (Model Color)	 Black (Model Color)

1. I painted whole skin with GW Layer Deathworld Forest. Don't try to cover whole area just one layer. Skin has many subtle detail, so use multiple thin coat.

2. I washed skin's deep area with GW Base Incubi Darkness. Even is not Shade or Ink, most paint can make wash. Just diluted paint with water ( Approximate Paint 1 : Water 5 ).

Then washing with multiple thin coat. When you washed thin but multiple, you can get deep-smooth shade. Washing has problem which make model dirty. So washing only deep area, not whole skin.

3. If you get enough shade, now diluted GW Layer Deathworld Forest + GW Base Incubi Darkness (1:1) with water (Paint 1 : Water 3) and glazing color's border.

You can see the inside of red circle had smoothed shadow.

4. Now I highlighted skin with GW Layer Deathworld Forest. I using glazing technique again. I tried to make smooth as possible.

You can see the inside of red circle has smoothed highlighted skin.

5. I highlighted skin with GW Layer Deathworld Forest + Vallejo MC Ivory (2:1).

6. I highlighted skin with GW Layer Deathworld Forest + Vallejo MC Ivory (1:1). Draw multiple thin line Instead of painting side. It may not be noticeable with face, but you can get much better result with shoulder's skin texture.

Also I painted eye with GW Layer Mephiston Red, and draw pupil with Vallejo MC Black.

7. I highlighted wrinkle and most bright part of face with GW Layer Deathworld Forest + Vallejo MC Ivory (1:2). You may feel color is overwhelmed now, but it's okay. We would adjust the whole color later with glazing.

8. I painted deep shadow with GW Base Khorne Red + GW Layer Deathworld Forest (2:1). This red shadow bring skin color to life.

And I painted inside of mouth with GW Khorne Red.

9. Clean up the smudges area with Step 6 and 7 color, painted tongue with GW Layer Mephistone Red.

I painted tooth with GW Base Rakarath Flesh and highlighted with GW Layer Pallid Wych Flesh .

10. I like previous result, but I decided to change a color similar to the official color.

Glaze whole skin with GW Layer Loren Forest (Paint 1 : Water 3). Left photo has been glazed 3 time. Don't forget to little wipe your brush before glazing.

11. I glazed again with GW Layer Kabalite Green for deep tone. Left photo has been glazed 3 time again.

If you have the color you want, painted deep shadow with Step 8 color. Now skin is done!
